

## **IN THE CLAIMS**

Amend the claims as follows.

1. (Currently Amended) A process for treating, ~~especially for caring for, making up or coloring,~~ at least a part of the human body, by applying at least two treatment products simultaneously to a localized area of said part of the human body as a function of characteristics of the localized area and/or of a predetermined design, in order to obtain a mixture of said treatment products directly on the localized area, said treating being viewed on a support other than said localized area prior to said applying. ~~at least one treatment product comprising at least one solvent in a proportion of at least 10% by weight.~~

2. (Original) The process as claimed in claim 1, in which the application of several treatment products is performed by jet.

3. (Original) The process as claimed in claim 2, in which at least one jet is produced by a thermal means capable of forming bubbles of treatment product.

4. (Currently Amended) The process as claimed in claim 2 4, in which at least one jet is produced by a piezoelectric means.

5. (Previously Presented) The process as claimed in claim 2, in which at least one jet is deflected.

6. (Currently Amended) The process as claimed in ~~any~~ claim 1, in which at least one of the treatment products comprises at least one solvent in a proportion of at least 10% by weight. ~~a step of viewing a chosen coloration or make-up design takes place before the treatment products are applied.~~

7. (Previously Presented) A device for carrying out the process as claimed in claim 1, characterized in that it comprises a means for positioning said part of the human body, and a means for applying treatment products to said part as a function of a predetermined design.

8. (Original) The device as claimed in claim 7, characterized in that the application means comprises a plurality of treatment product reservoirs and a plurality of spraying nozzles, each nozzle being fed by a reservoir.

9. (Previously Presented) The device as claimed in claim 7, characterized in that the application means comprises at least two reservoirs and/or at least two nozzles.

10. (Previously Presented) The device as claimed in claim 7, characterized in that it comprises means for controlling the position of the application means relative to the part of the area to be treated.

11. (Previously Presented) The device as claimed in claim 7, characterized in that it comprises means for automatic control of the total amount and of the partial amounts of each product as a function of the desired visual characteristics.

12. (new) The process of claim 1 wherein said treating comprises at least one of caring for, making up or coloring at least a part of the human body.

13. (new) A process for treating at least a part of the human body by applying at least two treatment products simultaneously to a localized area of said part of the human body as a function of characteristics of the localized area and/or of a predetermined design, in order to obtain a mixture of said treatment products directly on the localized area, a step of viewing a chosen coloration or make-up design taking place before any treatment product is applied.

14. (new) A process for treating at least a part of the human body by applying at least two treatment products simultaneously to a localized area of said part of the human body as a function of characteristics of the localized area and/or of a predetermined design, in order to obtain a mixture of said treatment products directly on the localized area, a step of viewing a chosen coloration or make-up design taking place before caring for or making up products are applied.

15. (new) The process of claim 13 wherein said treating comprises at least one of caring for, making up or coloring at least one part of the human body.

16. (new) The process of claim 14 wherein said treating comprises at least one of caring for, making up or coloring at least one part of the human body.
